

IN THE SPECIFICATION

Please replace the paragraph beginning at page 37, line 18 to page 38, line 4, with the following rewritten paragraph:

These compounds may be used singly or in combination of two or more kinds. The amount of the initiators is generally in the range of 0.1 to 60 parts by weight, preferably 5 to 50 parts by weight, more preferably 10 to 40 parts by weight based on 100 parts by weight of the polymer (A) (C). When the amount is in this range, the composition is less liable to be affected by the deactivation of radicals by oxygen (which causes deteriorated sensitivity), and compatibility and storage stability are excellent. The radiation-activated radical polymerization initiators may be used in combination with radiation sensitizers.

Please replace the paragraph beginning at page 76, line 3, with the following rewritten paragraph:

AA: Solder balls were uniformly spherical without the so-called bridges that were a result of joining together of solder balls. Solder balls were ~~not~~ formed in the resist apertures.
